

Kebetulan Serius Project

Company Deck

What's *Inside*

01 Introduction

02 Services

03 Case Studies

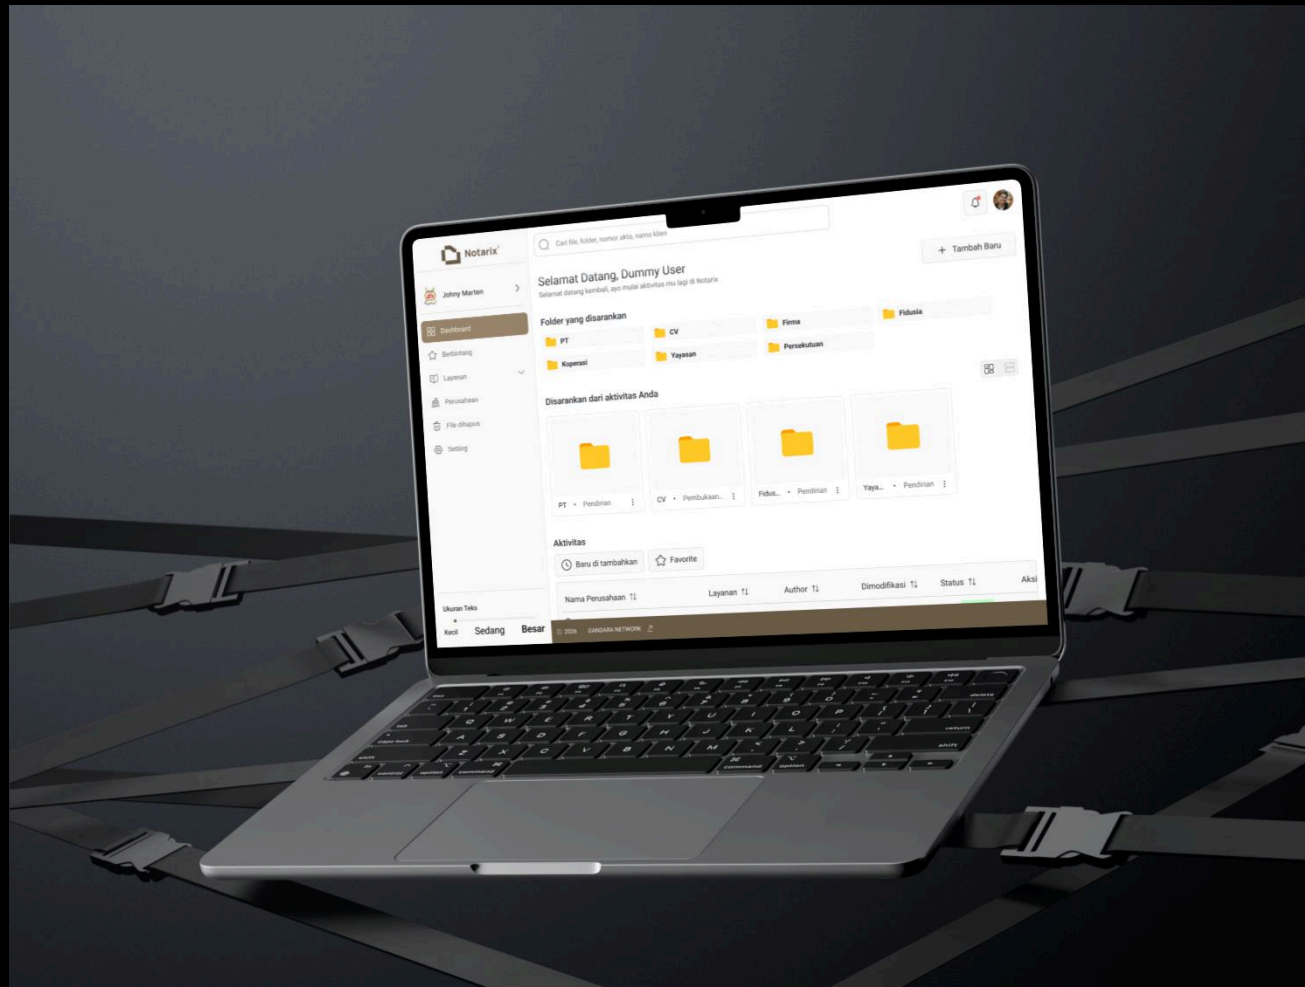

04 Who We Are

05 Engagement

06 Next Step

Our Core *Proposition*

Most agencies deliver output.
We build systems that outlast the project.

The *Problem We* Solve

Many businesses invest in digital products that look good at launch — but slow them down six months later.

01

Disconnected *products*
that look polished but
don't scale

02

Agencies that
deliver and
disappear

03

Feature-heavy
products without
clear direction

04

Technical debt
that's expensive to
maintain

The result: *wasted budget*, confused users, and products that need to be rebuilt from scratch.

We solve this by building digital products with structure, intention, and a long-term growth mindset.

Our *Build* Process

Every project moves through four phases: Discover, Design, Build, and Scale. Each stage brings alignment and keeps momentum from idea to growth.

01

Discover

We map your business goals, user needs, and technical constraints before writing a single line of code.

02

Design

Clear UX architecture and UI systems built to support your product as it grows.

03

Build

Clean code, reusable components, and structured handoffs between design and development.

Kebetulan Serious is built on one belief:
digital *products that grow with* the business
are built with intention from day one.

SERVICES

01 **Web & App** *Development*

Complex products require thoughtful engineering. We design and build web and mobile applications that are fast, scalable, and easy to maintain, from MVP to enterprise-grade systems.

02 **UI/UX** *Design*

Good design is not decoration. We design products that users understand intuitively - with clear flows, strong visual hierarchy, and interface systems built for consistency and scale.

03 **SaaS** *Engineering*

Most SaaS products are built to launch. We build them to scale. From multi-tenancy architecture to role-based access control - we engineer the infrastructure your product needs to grow from 10 to 10,000 users without rebuilding.

04 **IoT** *Engineering*

We bridge the physical and the digital. From sensor integration to real-time dashboards, we build IoT systems that make operational data useful, accessible, and actionable.

05 **AI & Automation** *Integration*

We Integrate intelligent workflows and automation to improve usability without adding complexity

Our Full *Cycle Product* Build Process

Every engagement follows a disciplined execution roadmap from discovery through launch and optimization. Each stage includes defined deliverables, milestone approvals, and transparent progress reporting.

01 Business Discovery & Goal Alignment

02 User Research & Requirements

03 UX Architecture & Information Design

04 UI Design & Design System

05 Prototype & Validation

06 Development & Engineering

07 Testing & Quality Assurance

08 Launch & Continuous Improvement

BENEFITS

Reduced
Execution Risk

Faster Time to
Market

Products built
to scale

CASE STUDIES

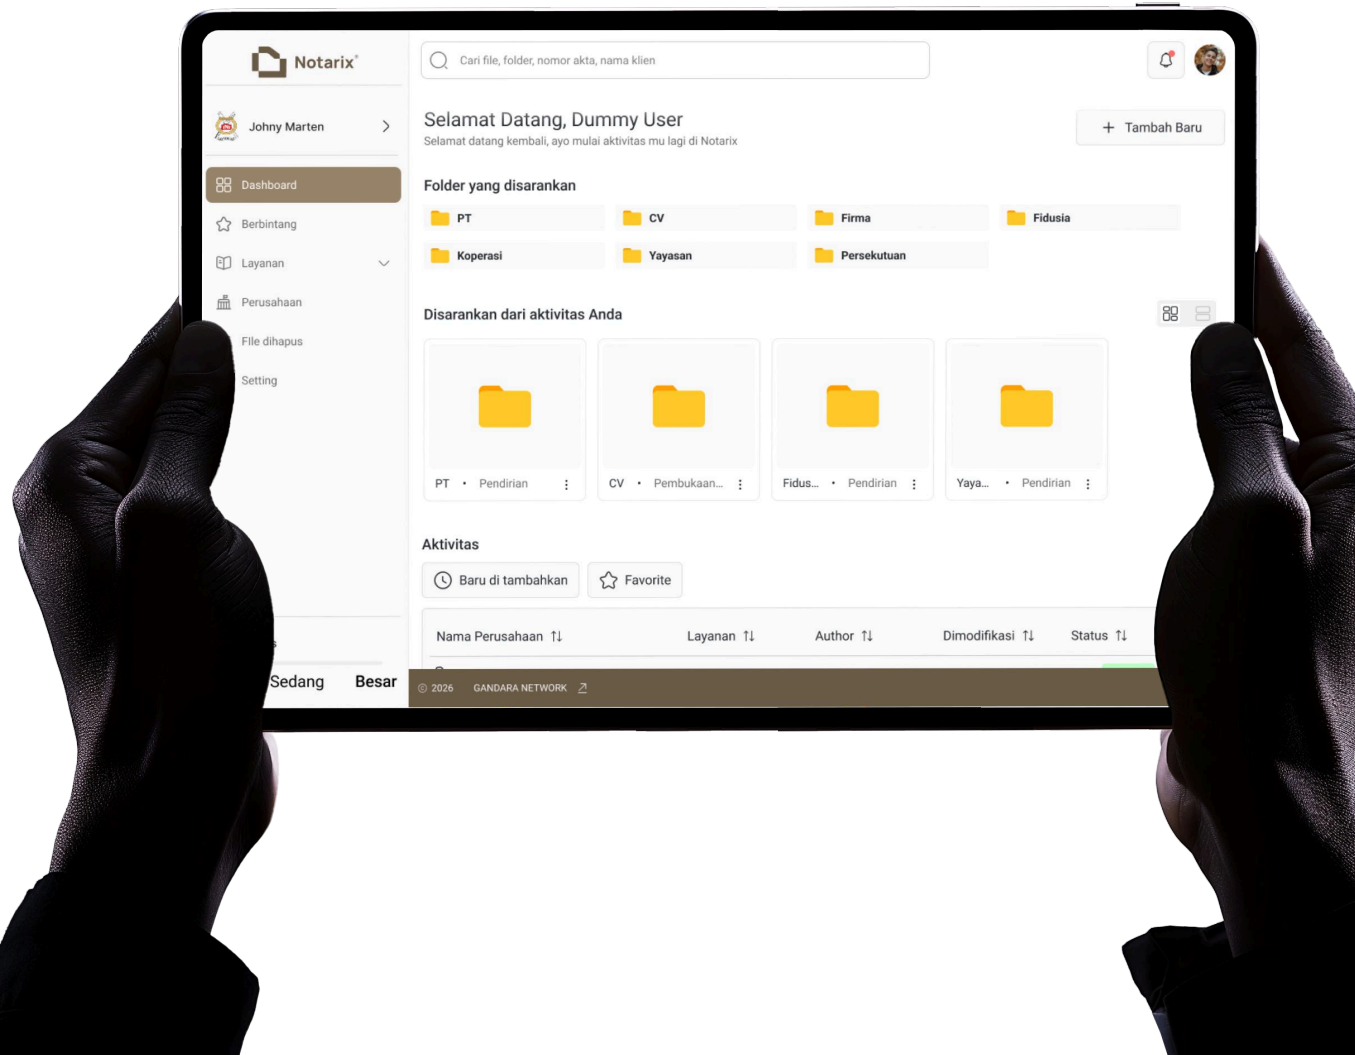

Selected *Work*

Every engagement we take on is built around
a product that actually performs.
Our work spans SaaS platforms, enterprise systems,
and industry-specific digital products.

Notarix is a Document Management System built specifically for notary offices, digitizing and streamlining the entire document lifecycle, from creation to archiving.

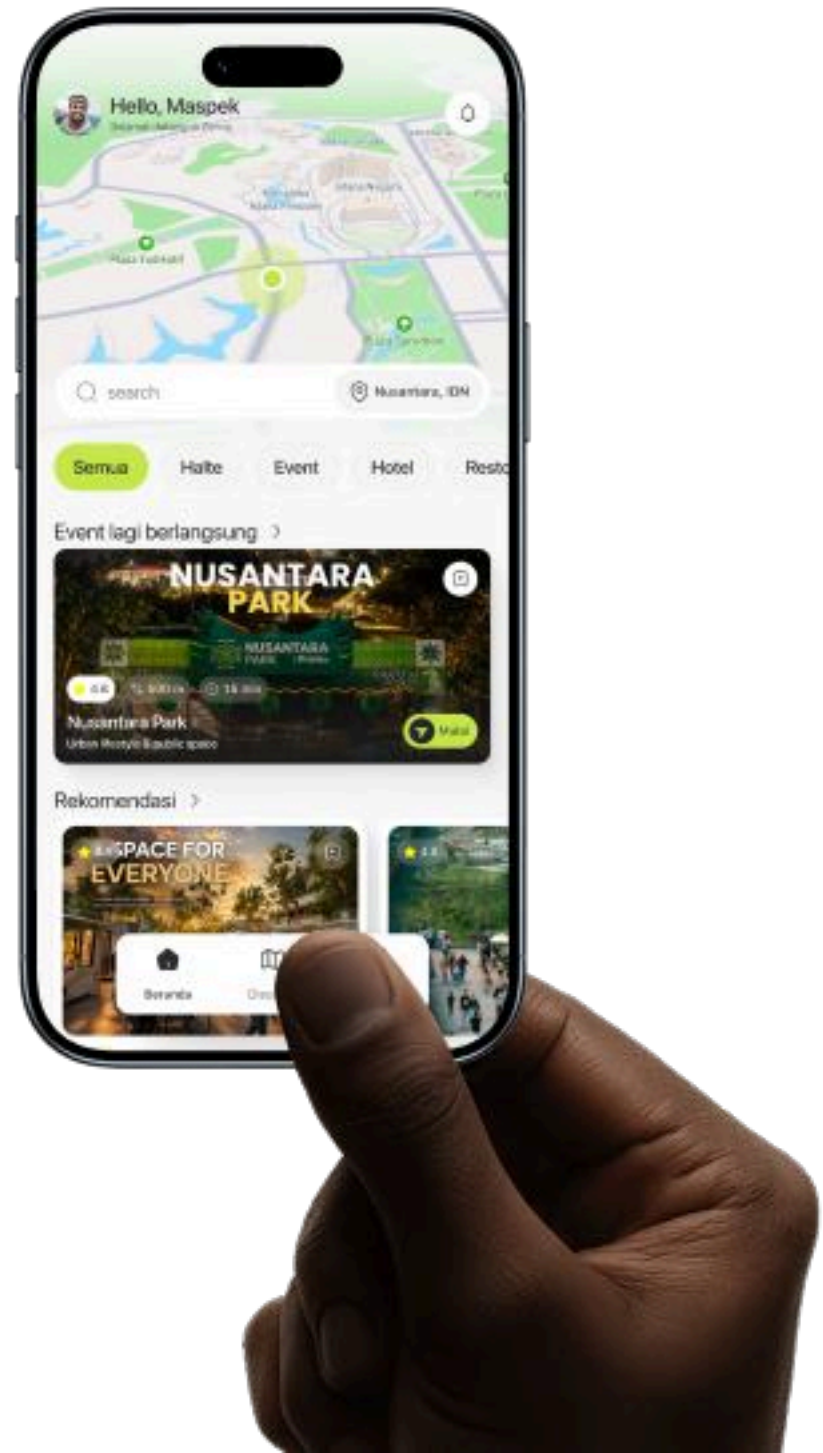

Project Name	Notarix DMS
Client	J**** M*****
Services	SaaS Engineering
Category	Legal Tech / Document Management
Status	Active Client

Interactive city map designed for walkers, cyclists, and event-goers. Built for tropical urban life, starting at Indonesia's new capital, IKN.

Project Name	Zenvy City Maps Apps
Client	Kebetulan Serious Project's Product
Services	SaaS Engineering
Category	Apps City Maps
Status	On Progress

OUR *STORY*

Kebetulan Serius Project started as Cloudara — a small team that kept getting asked by founders and business owners for one thing:

"just build something that actually works." We renamed. We refocused. Today, we build digital products with intention — for businesses that take their growth seriously. Not by accident. Kebetulan Serius.

Visi & Mission

Visi

To be go-to technolgy studio for growth-focused companies across asia and beyond - known not just for out work, but for the way we work

Mission

To build digital products with intention, solving real problem, for real bussiness, one system, at a time

Our Core *Values*

01

Builder Mentality

We ship, we learn, we iterate.
Done right always beats done fast.

02

Intention Over Output

every decision design,
architecture, pricing is
anchored in business logic, not
trends or aesthetics

03

Long-Term Thinking

We design products to evolve
and scale, not just to launch.

04

Radical Transparency

We tell you what we see, even
when it's not what you want to
hear.

05

Crafted Execution

We care about the details.
Because your users will.

Average Project *Timelines*

Project timelines vary based on scope, complexity, and stakeholder involvement. These estimates reflect the full product build process, not just design or development alone.

Service	Timeline
Landing Page / Marketing Website	2 – 4 weeks
Web Application MVP	6 – 12 weeks
Custom Web Application	10 – 20 weeks
SaaS Product (Full Scope)	10 – 20 weeks
IoT System Integration	Custom Scope

Investment Ranges

Project pricing varies based on scope, complexity, and product requirements. The ranges below reflect common engagement starting points.

Landing Page / Marketing Website	Rp 15.000.000 - Rp 35.000.000
Web Application MVP	Rp 45.000.000 - Rp 85.000.000
Custom Web Application	Rp 75.000.000 - Rp 150.000.000+
SaaS Product (Full Scope)	Rp 120.000.000 - Rp 250.000.000+
AI & Integrated Automation	Rp 80.000.000 - Rp 180.000.000+
IoT System Integration	Rp 150.000.000 - Rp 350.000.000+

Basic

UMKM & Personal Brand

Rp 4500 K / bln

min. 1 bulan

Fokus pada stabilitas, keamanan, dan pemantauan sistem agar aplikasi tetap online.

- ✓ Kuota Kerja: 60 Jam Pengembangan / Bulan
- ✓ 1 Developer + 1 Designer
- ✓ Hosting + domain included
- ✓ 2x revisi/milestone
- ✓ Support WA (jam kerja)
- ✓ Monthly report singkat
- ✗ Priority queue
- ✗ Dedicated Slack channel

Cakupan : Bug fixing ringan, server monitoring, security patching, backup berkala.

Growth

PT kecil-menengah yang butuh tim tech dedicated dan sistem yang terus berkembang

Rp 8000 K / bln

min. 1 bulan

Pilihan terbaik untuk SaaS dan web app yang aktif merilis fitur baru berdasarkan feedback pasar.

- ✓ Kuota Kerja: 120 Jam Pengembangan / Bulan
- ✓ 2 Developer + 1 Designer
- ✓ Unlimited concurrent projects
- ✓ Hosting & domain included
- ✓ SSL, backup rutin, monitoring aktif
- ✓ Unlimited revisi dalam scope
- ✓ Priority queue, antrian prioritas
- ✓ Monthly performance report
- ✓ Garansi bug fix 30 hari post-launch
- ✗ SLA & uptime guarantee

Cakupan: Semua fitur Basic + UI/UX tweak, pembuatan fitur baru/MVP lanjutan, optimasi performa database.

Enterprise

Dukungan tingkat tinggi untuk arsitektur kompleks, data pipeline, dan optimasi model pintar.

Custom by Discovery

Fleksibel

Untuk enterprise dan sistem kompleks yang butuh tim dedicated penuh dengan SLA dan compliance.

- ✓ Full dedicated team (sesuai kebutuhan)
- ✓ Unlimited projects & revisi
- ✓ Hosting + domain included
- ✓ Infra management penuh
- ✓ SLA & uptime guarantee tertulis
- ✓ Priority 24-jam support
- ✓ Dedicated project manager
- ✓ Regulatory & compliance support
- ✓ Custom reporting & dashboard
- ✓ Onboarding training tim klien
- ✓ Garansi bug fix 60 hari post-launch
- ✓ White-label option (tersedia)

Cakupan: Semua fitur Growth + fine-tuning model AI, debugging hardware-to-cloud, cost-optimization API/ Cloud, SLA respons cepat (< 4 Jam).

Contact & Next *Steps*

Let's Talk About Your Product

We recommend starting with a brief discovery call to understand your goals before recommending an approach.

Step 1

Discovery Call

Understand your product vision, goals, and constraints.

Step 2

Scope & Proposal

A clear engagement proposal with timeline and investment.

Step 3

Kickoff & Build

Team introduction and formal project launch.
